My husband is a professional motorfreight transport technician (truck Driver). He purchased an XM Radio last year and loves it because he no longer has to search for a local station for the weather, road and traffic conditions for the area he is in or going to.

XMRadio is a vital link for professional drivers across this country in much the way as CB Radios and cell phones.

As for me I have recently begun long distance driving for my job and am looking at investing in an XM Radio for my vehicle.

The local radio stations in this area do not give good coverage of national, international news or weather forecasts. There is only one that I listen to because I like the programing. The rest well they are a waste of my time. With XMRadio there is a wider option to chose from but most importantly you can get the weather forecasts and news at anytime for anywhere in the country.

Reject NAB petition 04-160. The NAB should not hold the reins and dictate to the American public what they can listen to when they are not willing to serve the needs of their listeners.
